American Sovereign Bullion

THE DIGITAL $4.7 QUADRILLION MIGRATION: STOCKS TO BLOCKCHAIN.

A GUIDE TO DIGITAL TRANSFORMATION & BLOCKCHAIN ASSET MIGRATION.

Published by American Sovereign Bullion • (844) 272-2428 • ASBgold.com

A NOTE BEFORE YOU BEGIN

ONE LAST THING, BEFORE YOU PUT THIS DOWN.

There is a conversation, somewhere in the next ten or fifteen years, between one of your grandchildren and one of your great-grandchildren. The older one is going to be teaching the younger one how the family came to have what it has. He or she is going to walk into a room and open a drawer, or unlock a safe, or pull out a depository statement, and say: "This is what your great-grandparent left us. They bought it the year the system changed."

That conversation is not going to happen because of a brokerage statement. Brokerage statements get rolled over, migrated, repriced, and forgotten. That conversation happens because of something a child can hold.

We are not going to tell you that everything in this report is going to happen. Nobody knows the future. We are going to tell you that the architecture is being assembled in public, that the timeline is short, and that the cost of preparing is small while the cost of not preparing is what you intended to leave behind.

Twelve months from now, the people who acted this spring will be glad they did. The people who did not act will be looking for someone to blame, and there will be plenty of comfortable people in expensive offices ready to tell them it was nobody's fault.

Be the person who acted.
Be the great-grandparent in the story.

Twelve months from now, you will be glad you read this today.

American Sovereign Bullion

American Sovereign Bullion is the only company I recommend for physical gold and silver and I don’t lend my name to anyone I don’t trust.

Larry Kudlow

Host of Fox Business Network's "Kudlow"

Larry Kudlow is a paid spokesperson for American Sovereign Bullion.

FROM THE DESK OF AMERICAN SOVEREIGN BULLION

A PERSONAL WORD BEFORE YOU READ ON.

Dear Friend,
I'm going to tell you something most Americans will never hear on the evening news. Most retirees will never hear it from their financial advisor either. And by the time the Wall Street Journal puts it on the front page, it will already be done.

Earlier this month, the company that holds the records on virtually every stock, bond, and mutual fund owned by Americans — the Depository Trust & Clearing Corporation, the DTCC — quietly announced that it is moving the entire $4.7 quadrillion American capital market onto blockchain technology.

That is not a typo. Quadrillion with a Q. More money than every country on earth combined.

And the shares of stock in your IRA, the bonds in your 401(k), the mutual funds in your brokerage account, even your federal Thrift Savings Plan — every one of them is about to be converted into something called a "tokenized entitlement."

Not a share you own. A digital entry on a blockchain ledger run by Wall Street.

Nobody asked you. Nobody is going to ask you. And once it's done, you can't undo it.

> **If you are 55 years old, you might still have one full market recovery left in you. If you are 65, perhaps you don't.**

Read this report carefully. And when you finish, do me one favor. Pick up the phone.

Sincerely,

— Paul Preston

BEFORE YOU TURN ANOTHER PAGE

EXECUTIVE SUMMARY

What this report explains, in five facts. The architecture is being assembled in public. The timeline is short. Read it carefully.

WHAT THIS REPORT WILL TELL YOU

Five facts most Americans will never hear on the evening news

01

$4.7 QUADRILLION
The amount of American securities the DTCC is moving onto blockchain — every IRA, 401(k), and brokerage account in the country.

02

OCTOBER 2026
The month the tokenization service goes commercial. Live test transactions begin in July. The clock has already started.

03

REVERSIBLE CLAIMS
The DTCC’s own legal term for what your assets will become. Not ownership. Not a share. A digital token representing a claim against intermediaries.

04

FOUR DISCLOSED RISKS
Smart contract bugs, loss of direct ownership, unclear SIPC protection, and hacker exposure. All disclosed by the DTCC itself.

05

ONE ASSET CLASS UNAFFECTED
Physical gold, held in a non-bank depository under your name, cannot be tokenized, cannot be hacked through code, and does not require anyone’s permission to be yours.

WHO THIS REPORT IS WRITTEN FOR

Most reports about Wall Street and blockchain are written for traders. This one is written for you — the saver, the retiree, the household that spent forty years building something and now wants to keep it.

If you are 55, you might still have one full market recovery left in you. If you are 65, perhaps you don't. The retirement you spent forty years building was designed for a financial system that may not exist twelve months from now — not because of a recession, not because you did anything wrong, but because Wall Street is rebuilding the plumbing underneath your savings.

> **At this stage of your life, your money is not really your money anymore. It is your children's money. It is your grandchildren's money. The decisions you make this year about how you hold it will outlive you by decades.**
>
> **— Paul Preston, American Sovereign Bullion**

HOW TO READ THIS REPORT

Chapters 1 through 4 explain what is happening to your accounts and why. Chapters 5 through 7 give you the larger picture — including two case studies of retirees who faced the same decision you are facing now, and the 1933 historical precedent that most Americans have never heard the full story of. Chapter 8 explains why physical gold exists outside this entire system. Chapters 9 and 10 answer the questions you may have about your advisor and about calling us. The Action Plan at the end gives you the six concrete steps to take, in order.

Read carefully.
Then call.

THE ANNOUNCEMENT THAT WILL REWRITE AMERICAN RETIREMENT

01
CHAPTER

What Just Happened

Last month, the company at the very center of the American financial system — the one that quietly holds the records on virtually every share of stock, every bond, and every mutual fund owned by Americans — quietly announced two things.

Most Americans missed the announcement. Most financial advisors will not bring it up. And the financial press, for reasons that will become clear, has barely covered it.

But the announcement, in plain English, is this: the entire $4.7 quadrillion American capital market is being moved onto blockchain technology. And the architecture being built to do it will fundamentally change what “ownership” of a stock, a bond, or a mutual fund actually means.

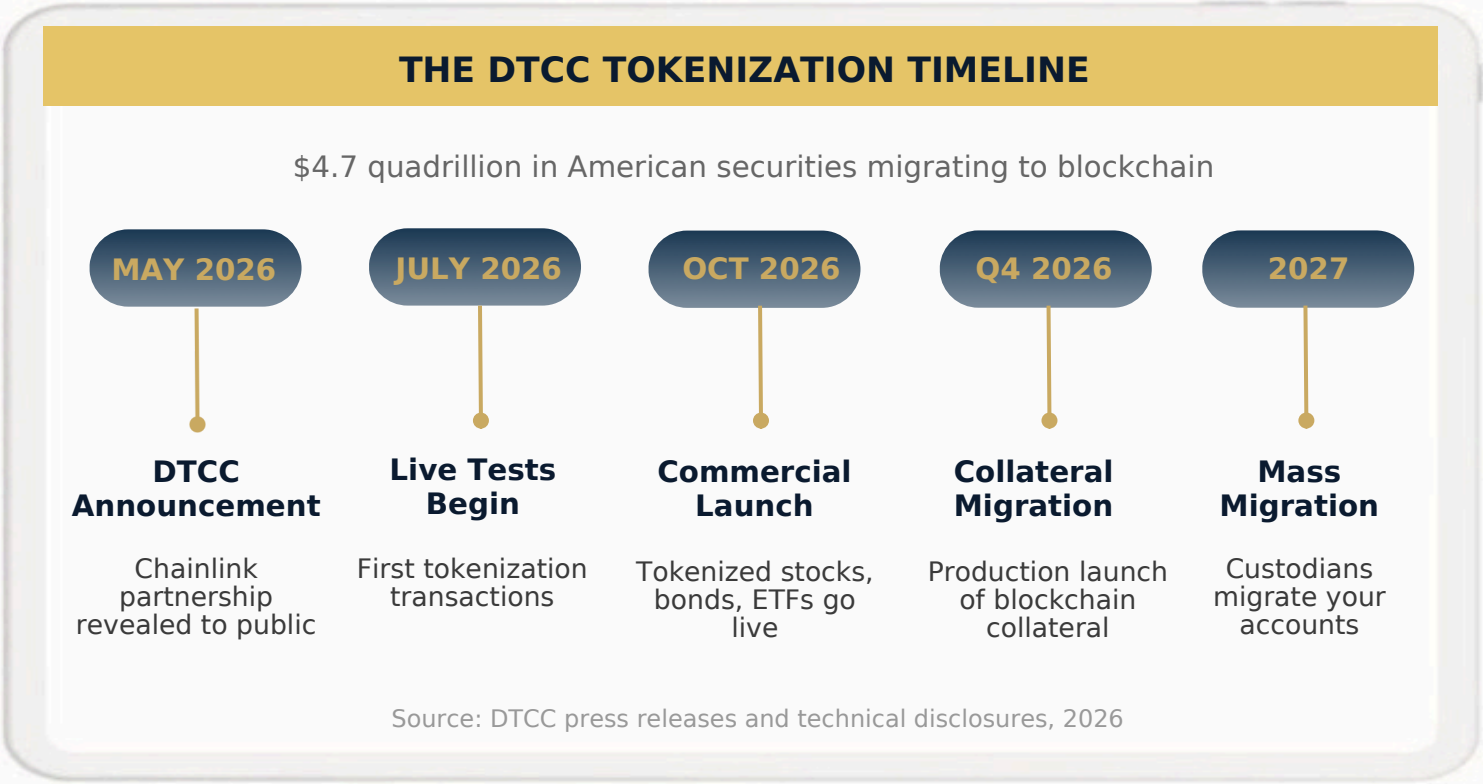

Let us walk you through it.

Here is what they announced.

Item one: the DTCC is partnering with a cryptocurrency firm called Chainlink to integrate blockchain technology into the system that manages collateral for all American securities. Production launch: fourth quarter of 2026.

Item two: the DTCC is building a service that will allow stocks, ETFs, and bonds — the actual contents of your retirement account — to be converted into digital tokens on a blockchain. Live test transactions begin this July. Full commercial launch: October 2026.

In other words, within roughly five months from the day you are reading this, the shares of Apple, ExxonMobil, the S&P 500 index fund, the Treasury bond fund, and every other holding in your IRA can begin being converted from a paper share into a digital token recorded on blockchain.

The DTCC, in its own legal disclosures, calls these new tokens “reversible claims” — not ownership. Let that word sit for a moment. Reversible.

If this already sounds wrong to you, trust that instinct. Call now.

WHAT THE DTCC HAS ALREADY ADMITTED IN ITS OWN DISCLOSURES

02
CHAPTER

The Four Threats Most Americans Don’t See Coming

The DTCC has not hidden any of this. In its own technical disclosures, in published memos, and in regulatory filings, it has identified four specific risks of what it is building. These are not our claims. These are the DTCC’s own admissions.

Read each one slowly. Each one, alone, would be reason enough to pay attention. Together, they describe a system being built around your retirement account that you almost certainly did not sign up for — and that, once it goes live, cannot be undone.

Threat One: Mistakes You Cannot Undo

In the financial system you grew up with, if something goes wrong — a wire transfer to the wrong account, a misposted trade, a fraudulent transaction — a human being at a bank or brokerage can reverse it. That has been true your entire adult life.

Blockchain does not work that way. Blockchain transactions are executed by lines of computer code called “smart contracts.” If the code has a bug — and bugs are routine — the mistake happens instantly and it is, in the DTCC’s own words, irreversible. There is no 1-800 number. There is no manager you can ask for. The transaction is final the moment it executes.

Now imagine that bug occurs during the transfer of a million retirement accounts. Pause and read that sentence again.

IN PLAIN ENGLISH

Right now, if your brokerage executes a trade wrong, a human being can call the trade desk and reverse it before the day ends. That phone number, that human, that paper trail — those exist precisely because the old system was designed assuming mistakes would happen.

A smart contract has no phone number. The day a settlement bug routes a fraction of a percent of your IRA to the wrong wallet, the funds are gone. There is no one to call. That is not speculation — it is exactly what has happened, repeatedly, on every major blockchain platform deployed so far.

Threat Two: You Will Not Actually Own Your Shares Anymore

Read this slowly. The DTCC has explicitly stated, in its own technical disclosures, that the tokenized assets created under the new system are “reversible claims” — not direct ownership.

In plain English: today, when you own 100 shares of Apple in your IRA, those shares legally belong to you through a chain of custody anchored by federal law. Under the new system, you will own a digital token that represents a claim against an intermediary, who in turn holds the share. Two layers between you and the asset, where today there is essentially one.

If the intermediary fails, if the blockchain platform fails, if the token contract is exploited — your claim is against a system, not a security.

Threat Three: SIPC Coverage Becomes Murky and Uncertain

Securities Investor Protection Corporation insurance protects $500,000 of your brokerage holdings against broker failure. It has been the backbone of investor confidence since 1970.

Tokenized assets are a new asset class. SIPC has not formally clarified how its coverage applies. Industry attorneys writing on the subject have flagged the same question we are flagging here: tokenized claims may not fall under traditional SIPC protection, and the law is being written as the technology goes live.

Translation: by the time the rules are clarified, the migration will be complete.

Threat Four: Hackers Steal What Banks Cannot Recover

Cumulative theft from blockchain platforms over the past five years exceeds $20 billion. That is not a typo. That is the publicly reported, traceable loss — the actual losses are widely understood to be far higher.

When a hacker drains money from a traditional bank account, the bank, the FDIC, and federal investigators can pursue it. The chain of accountability is built in. When a hacker drains a blockchain wallet, the funds are gone, often forever, transferred through anonymous addresses across jurisdictions in minutes.

Now imagine that infrastructure holding the retirement savings of three hundred and thirty million Americans.

If any one of these four threats troubled you, we want to be honest with you about what is going on inside the financial industry right now: the conversations about these risks are happening, but they are happening in private. The decision to migrate is happening in public.

And here is the second thing nobody is going to tell you: the dollar that buys those tokens is itself losing value, by the year, by design.

$100,000 IN 1971—PURCHASING POWER OVER TIME

What the same dollars could buy then, vs. now

IF YOU HELD U.S. DOLLARS

$100,000 in 1971

= $14,200

in 2026 purchasing power

↓ 86% loss to inflation

IF YOU HELD GOLD

$100,000 in 1971 (gold @ $35/oz)

= ~$6.4M

at 2026 gold prices

↑ 64x increase

Source: BLS CPI-U (1971–2026) and LBMA Gold Price PM (1971–2026)

This is not an argument that gold beats stocks over every decade. It is a reminder of a different kind of math. The dollars that buy the new tokens are the same dollars that lost 86 percent of their purchasing power over the last fifty years — and the system being assembled around your accounts does nothing to slow that erosion. It simply makes the erosion easier to track.

Chapter 3 explains what this means, in concrete terms, for the IRA, the 401(k), and the brokerage account sitting in your kitchen drawer.

THE PARTS OF YOUR FINANCIAL LIFE THIS WILL TOUCH FIRST

03
CHAPTER

What This Means for Your IRA & 401(k)

We have walked you through the announcement and the four threats. Now we want to be specific. Which parts of your financial life are at risk — and on what timeline.

If you are like most Americans 55 and older, your wealth lives in three or four buckets: an IRA from years of saving, a 401(k) or Thrift Savings Plan from your career, perhaps a brokerage account, and the cash and short-term Treasuries you hold in money market funds.

Every single one of those buckets is affected.

Your IRA

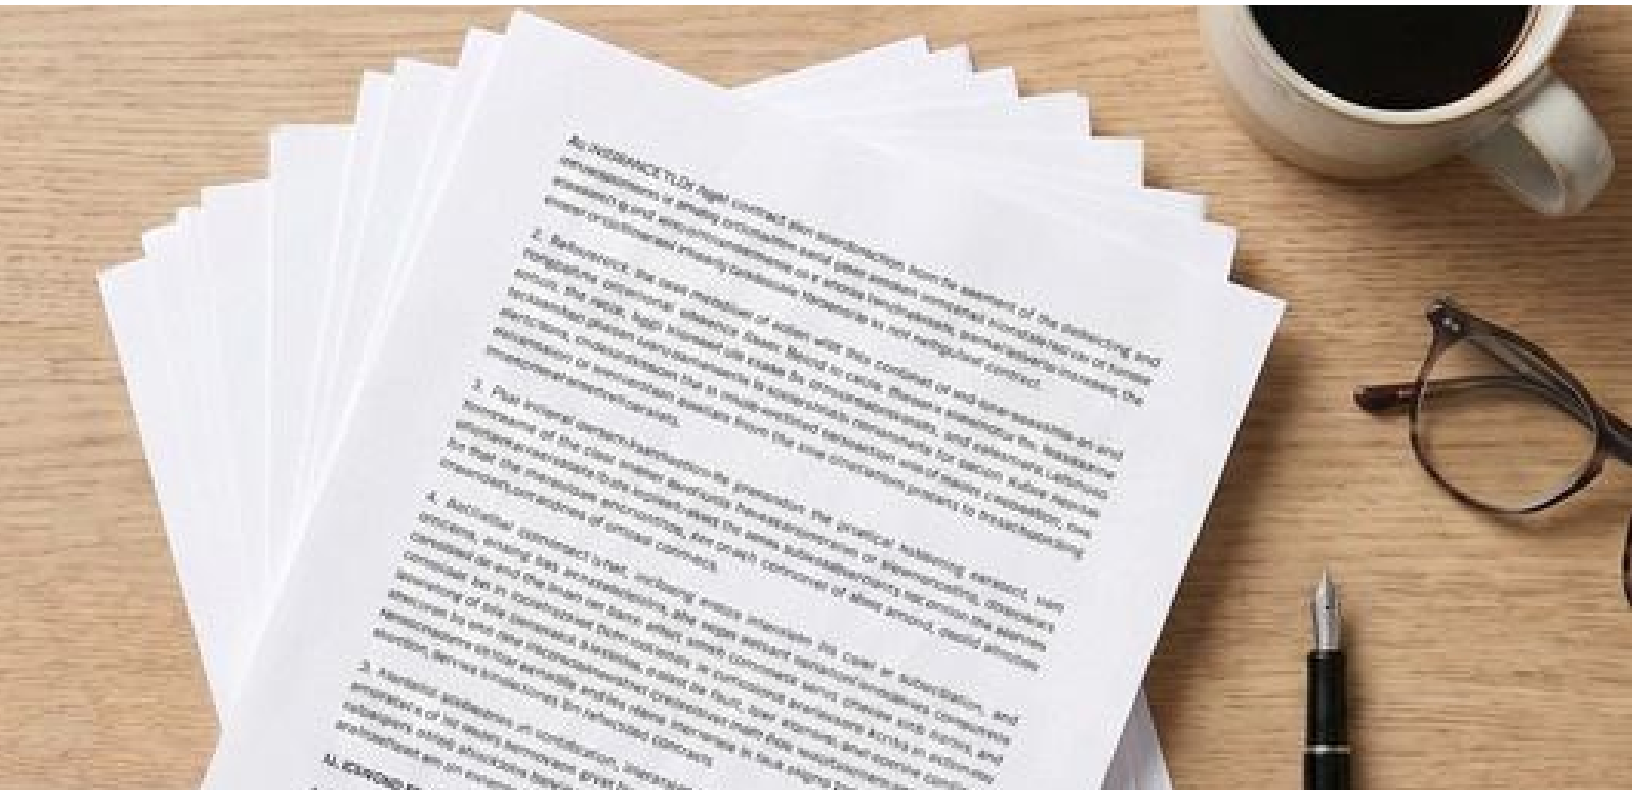

Every share, fund, and bond in your IRA is held in custody by an intermediary that ultimately settles through the DTCC. When the tokenization service goes live, your custodian will have the option — and eventually, almost certainly, the obligation — to migrate those holdings onto the new system.

You will not be asked. You will get a notice. The notice will be twenty pages long, written by lawyers, and you will be invited to consent to terms you cannot meaningfully evaluate. The default, if you do nothing, will be migration.

Your 401(k) and TSP

Same story, but with one important wrinkle: employer-sponsored plans are even more removed from your control. The plan administrator decides the platform. The platform decides the custodian. The custodian decides the settlement method. By the time the change reaches you, it is a fact, not a question.

If you are still employed and contributing, every two-week paycheck is funneling more of your money into a system that is about to be quietly rebuilt around you.

Your Brokerage Account

If you have an account at Schwab, Fidelity, Merrill, Morgan Stanley, or anywhere else, the same fundamental transition applies. Your broker will be expected, by regulators and by Wall Street itself, to begin migrating to the new infrastructure within the next several months — and to complete that migration over the following year.

You may keep using the same website. The login may not change. The statements may look familiar. Underneath, however, the legal nature of what you own will have shifted from “shares of a company” to “digital tokens representing claims against a chain of intermediaries.”

Your Cash and Money Market Funds

The DTCC has specifically named Treasuries as one of the first asset classes to be tokenized. Money market funds, ultra-short bond funds, and short-duration Treasury ladders — the safe haven for most retirees — will be among the earliest holdings affected. ***The cash you parked specifically because it felt safe is at the front of the line for migration.***

A TUESDAY MORNING IN 2027

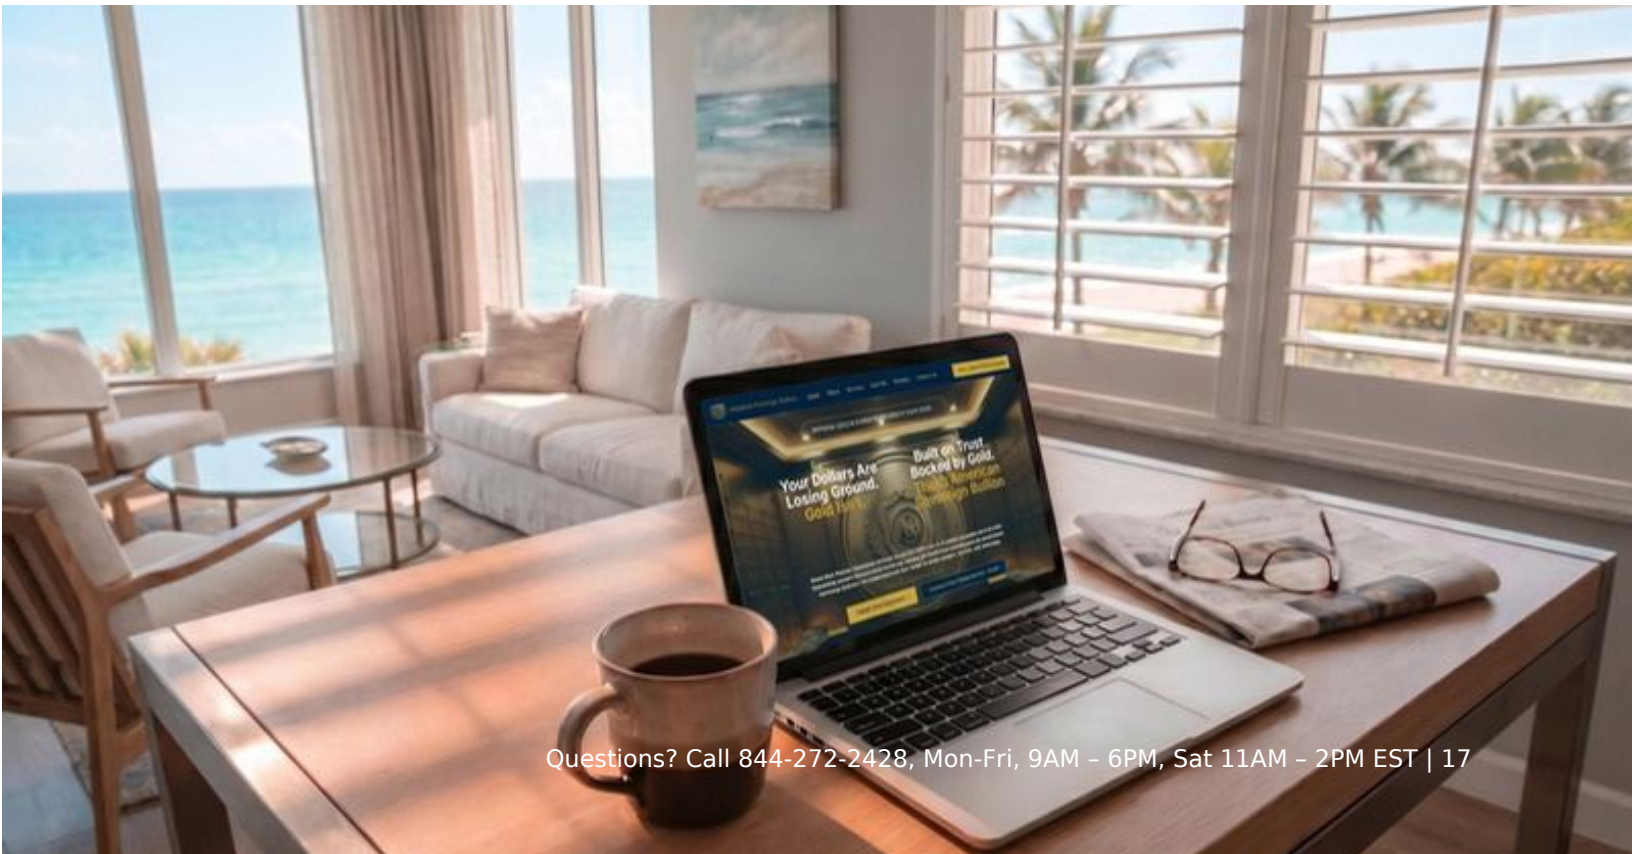

Imagine, for a moment, that nothing in this report turns out to be exaggerated. It is a Tuesday morning in the spring of 2027. You make your coffee. You sit down at the kitchen table and open your laptop to check your accounts, the way you have every Tuesday for fifteen years. The login page looks the same. The numbers look the same. There is, however, a small notice at the top of your account page that you do not remember seeing before.

“Certain holdings in this account have been migrated to our enhanced digital settlement platform. For details, click here.”

You click. You are shown a fourteen-page document. The phrase “tokenized entitlement” appears, along with the phrase “digital settlement infrastructure,” along with the phrase “as of the effective date.” The effective date was three weeks ago. You have ten days from that date to object. The window closed last Thursday.

You ask your advisor whether you still own the shares of Apple in the same way you did last month. He pauses briefly and says: “You own the economic equivalent.”

That is the morning. That is the future this report is written to prevent.

FOLLOW THE INCENTIVES

04
CHAPTER

Why Wall Street Wants This

At this point a reasonable person asks: if this is so problematic for ordinary savers, why is it happening? Who benefits?

The answer is straightforward. Wall Street benefits. Large institutional players benefit. The platforms running the new infrastructure benefit. The intermediaries who collect fees on every settlement benefit. The governments who gain the ability to see, tax, and ultimately control every individual financial position in real time benefit. The list is long, and you are not on it.

There are four specific reasons Wall Street wants this transition, and none of them have to do with helping ordinary Americans hold on to their savings.

Reason One: Programmable Settlement Means Programmable Fees

On a blockchain, every transaction can carry an embedded fee. The settlement layer, the token issuer, the custodial platform, and any number of intermediaries can each take a small slice of every trade, every dividend, every rebalance.

Today, the brokerage business is in a fee war. Many trades cost nothing. Tokenized infrastructure puts the fees back in — invisibly, automatically, and at scale.

Reason Two: Programmable Money

Tokenized securities can have rules built directly into them. They can be programmed to enforce trading restrictions, automatic margin calls, mandatory liquidations under stress, and — critically — they can be designed to interact with central bank digital currencies should one ever launch.

That is enormous power. The same code that lets a bank automatically liquidate a hedge fund's position can, with a small adjustment, enforce a tax rule on a retiree's holdings, freeze a politically inconvenient account, or apply a negative interest rate.

If that sounds far-fetched, ask a Canadian trucker.

Reason Three: Removing Friction Means Removing Protections

Most of the "inefficiency" Wall Street complains about is, on closer inspection, consumer protection. Settlement delays exist so trades can be unwound when something goes wrong. Custodial chains exist so a court can recover stolen securities. Paper trails exist so a regulator can audit a fraud.

Tokenization streamlines all of that out of the system. The savings flow upward. The risks flow downward.

Reason Four: The Last Step Toward a Fully Digital, Fully Tracked Economy

Once your securities are tokens, your wages are direct deposits, your retirement accounts are migrated, and a central bank digital currency is launched — the entire financial life of every American citizen will be readable, programmable, and freezable from a single dashboard.

That is not a conspiracy theory. That is the architecture being assembled in public, in press releases, right now.

If this troubles you, you are not alone.
Many Americans are calling.

A CASE STUDY

05
CHAPTER

Robert’s Story

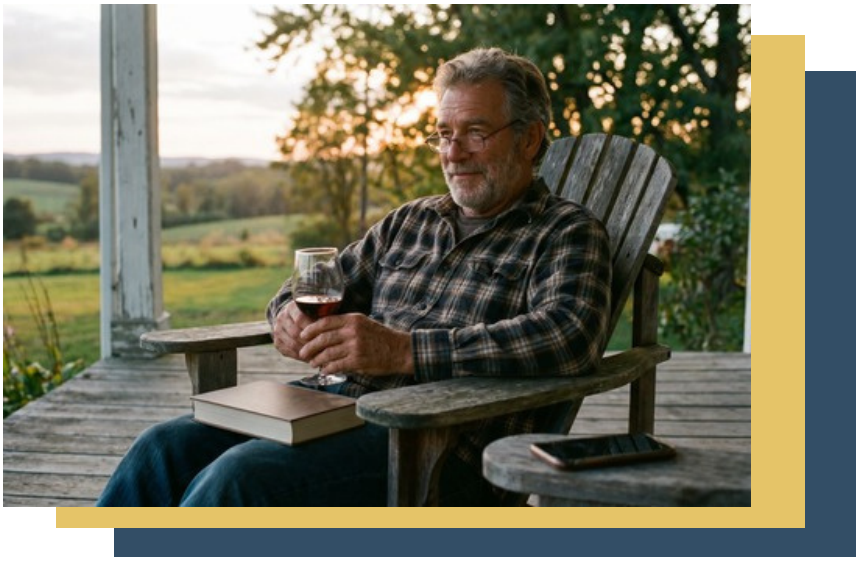

Names and certain details have been changed. The numbers, the choices, and the outcome are real.

Robert is sixty-eight. He is a retired civil engineer. He spent thirty-seven years working on bridges and stormwater infrastructure for the city of Indianapolis. He retired four years ago with a 401(k) of roughly $890,000, rolled it into an IRA at one of the major brokerages, and assumed that his job, as a financial decision maker, was largely done.

He was wrong.

Robert had survived the dot-com bust at age 41 with $90,000 in losses. He had survived 2008 at age 51 with $180,000 in losses. He had survived the 2020 crash, and then the 2022 inflation crash, and each time he had told himself that he was lucky to be working, that there was still time.

And then, in March of last year, his daughter — who works in tech, who has friends at the Securities and Exchange Commission — sent him a Wall Street Journal article about the DTCC, tokenization, and what was being quietly built around accounts like his.

He started reading. He read the press releases. He read the legal disclosures. He read about “reversible claims.” He read about smart contract failures. He read about $20 billion stolen from blockchain platforms in five years. He read about SIPC’s uncertain coverage of tokenized assets.

And then he did the math on his own situation. He had survived the dot-com bust. He had survived 2008. He had survived 2020. He had survived 2022. He was not going to survive a fifth event in retirement — not with twenty years of life expectancy and no salary coming in to replace what he lost.

Robert called American Sovereign Bullion. He spoke with a senior specialist for forty-five minutes. He asked every hard question he had. He did not commit to anything on that first call. He went and slept on it for a week.

The following Tuesday he called back and moved twenty percent of his IRA into physical gold, transferred tax-free through an IRS-approved rollover, stored at an independent depository in his name. He kept the other eighty percent in his traditional accounts.

> **He hung up the phone that evening. He poured a glass of wine on the back porch. For the first time in three years, he did not check his phone for market news at six, nine, and eleven p.m. He read a book his daughter had given him for Christmas. He went to bed at ten. He slept eight hours straight.**
>
> **— Robert, sixty-eight, retired civil engineer**

That is what we mean when we say "sleep at night." That is what a senior bullion specialist actually delivers — not a product, but a Tuesday evening with the phone face down.

Robert's first call lasted forty-five minutes.
Yours can too. Call now.

(844) 272-2428

AmericanSovereignBullion.com · Mon - Fri 9am - 6pm, Sat

A SECOND CASE STUDY

06
CHAPTER

Margaret’s Story

Margaret is seventy-six. She is a retired second-grade teacher. She lives in a small town outside Asheville, North Carolina. Her husband died eight years ago. She has two grown children and four grandchildren.

Her financial situation is simple. She has a paid-off house worth roughly $310,000. She has Social Security and a teacher’s pension that together pay about $4,100 a month. She has an IRA worth roughly $445,000, which her late husband’s financial advisor manages.

She does not really understand what is in the IRA. She knows it is “invested” and that the statements come every quarter. She glances at the bottom number, registers whether it went up or down, and files the statement in a drawer in the kitchen.

In the spring of 2026, Margaret started seeing news stories about “tokenization” and “blockchain” and “the DTCC.” She did not understand most of what she read. She called her advisor and asked. Her advisor told her, in the kind voice that advisors use with widows, that she should not worry about it and that everything was fine. She hung up and felt patronized for the first time in her life.

She called her oldest son, who is fifty-two and works in finance. He told her, more honestly, that he was not sure what was happening, that the technology was complicated, but that he had been wondering if some portion of her assets ought to be held in something “outside the system.” He used those exact words.

Margaret thought about it for three days. She thought about what it would mean, if everything she had been told for forty years about how shares of stock work turned out to be subtly, technically, legally different in 2027 than it had been in 2025. She thought about her grandchildren. She thought about the difference between leaving them a brokerage statement and leaving them something they could hold in their hand.

She called American Sovereign Bullion. She told the specialist she did not want to be rushed, did not want to be sold to, and would hang up the moment either happened. He said: “Yes ma’am. Take all the time you need.” They spoke for an hour.

Over the following six weeks, Margaret moved approximately twenty-five percent of her IRA into a precious metals IRA, holding physical gold and silver, stored at an IRS-approved independent depository in her name. She left the rest where it was.

> **A portion of what she will leave her children cannot be tokenized, cannot be frozen, cannot be reversibly claimed, and cannot be inflated away by any government on earth. Her oldest grandchild, when he is sixty years old, will still be able to hold it in his hand.**
>
> **— Margaret, seventy-six**

Whatever you leave behind, leave them something the system cannot touch.

(844) 272-2428

AmericanSovereignBullion.com · Mon-Fri 9 am - 6pm, Sat 11 am - 2 pm EST

HISTORY DOES NOT REPEAT. IT RHYMES.

07
CHAPTER

Why 1933 Matters Now

On April 5, 1933, President Franklin D. Roosevelt signed Executive Order 6102. It required American citizens to surrender most of their privately held gold to the federal government at $20.67 per ounce. Failure to comply was punishable by a $10,000 fine and up to ten years in prison. A few months later, the government revalued gold at $35 per ounce.

The effect, in plain English: Americans who complied were paid $20.67 for something the government then officially valued at $35 the next day.

It was the largest single peacetime transfer of wealth from American citizens to the federal government in the country’s history. And it was accomplished not by force, not by an armed seizure, but by an order, a deadline, and a fine. Most Americans complied because they trusted the system.

The order existed for forty-one years. It was not formally repealed until December 31, 1974.

Here is the question worth asking: why did the government feel it needed to seize gold in the first place?

The answer is straightforward. It needed to seize it because it could not control it. Gold, held privately by ordinary citizens, was the one form of savings that could not be devalued by printing more dollars. The order existed because the asset existed beyond government reach.

Now ask yourself the same question about tokenized securities.

A digital token on a permissioned blockchain is not beyond government reach. It is the most accessible asset in financial history. It is, by design, readable in real time, addressable to a specific account holder, and — if the right code is written into it — programmable to be frozen, taxed, distributed, or canceled with a single command from the platform operator.

In 1933, the government had to send a letter, threaten you, and trust you to comply. In 2027 or 2028, no letter is required. A tokenized account can be modified by an authorized party in the time it takes to refresh a web page.

> **The lesson of 1933 is not that gold was confiscated. The lesson of 1933 is that the government only confiscates what it cannot already see and control. The system being assembled around your retirement is, by design, fully visible and fully controllable.**
>
> **— American Sovereign Bullion**

Physical gold, held in a non-bank depository under your name, exists in a category of its own. It is one of the very few asset classes that has historically survived precisely because the system cannot easily see it, value it in real time, or modify the ledger of who owns it.

That is not a marketing claim. That is the only reason the 1933 executive order existed in the first place.

WHY PHYSICAL GOLD STANDS OUTSIDE THIS ENTIRE SYSTEM

08
CHAPTER

The One Thing They Cannot Tokenize

Throughout this report, we have walked you through what is happening to your accounts, why, and on what timeline. We have shown you that virtually every asset class held by American retirees is being moved onto a system the DTCC itself describes as carrying four specific, disclosed risks.

There is one asset class that cannot be tokenized, cannot be reversibly claimed, cannot be hacked through smart contract code, and cannot be modified by a platform operator from a dashboard.

Physical gold, held in a non-bank depository in your name.

We are not going to make grand claims about gold. Gold goes up and down in price. Its price can fall for years. It does not pay dividends. It does not pay interest. It is not an investment in the same sense that a stock or a bond is an investment.

Gold is a different thing. Gold is the asset class you turn to when you are no longer optimizing for return — you are optimizing for survival of a portion of your savings under a scenario where the system itself changes.

Three Things Gold Cannot Do

1. **It cannot be tokenized in your absence.**
A coin in a depository in your name is not a digital token. It is a physical object. No DTCC announcement, no smart contract, no platform operator can convert it into something else without your physical presence and consent.

2. **It cannot be revalued by anyone's code.**
A blockchain platform can, in theory, push an update that reclassifies what your tokens represent. A bar of gold is a bar of gold. Its value is whatever the world market says it is at the moment you sell it.

3. **It cannot be frozen by an authorized party from a dashboard.**
Tokenized assets, by design, are addressable to a specific account holder. Physical gold in your name, held at an independent IRS-approved depository, requires your physical authorization, in writing or in person, to be moved.

Here is the part most articles about gold do not explain clearly:

A precious metals IRA, also called a self-directed IRA, allows you to roll a portion of your existing IRA or 401(k) into physical gold and silver, transferred tax-free, stored at an IRS-approved independent depository in your name, all in compliance with federal tax law (Internal Revenue Code Section 408(m)).
You are not selling shares. You are not paying tax. You are not surrendering control. You are converting a portion of your retirement account into a different asset class — one that exists outside the system being assembled around the rest of your holdings.

The Bottom Line on Physical Gold

We do not believe physical gold is the answer to every question about retirement. We do not believe you should put all of your savings into it. We do not believe in scaring you into a transaction. We believe in honesty.

Here is the honest case for gold in 2026: the architecture being assembled around your other holdings carries real, disclosed risks. Gold sits outside that architecture. A modest allocation — most of our clients move between fifteen and twenty-five percent of their retirement assets — gives a household a meaningful piece of its savings that is not subject to those risks.

That is the math nobody at your brokerage is going to do with you. We just did it for you.

If you are 60, 70, or 80, you cannot afford to be the test case. Call now.

THE INCENTIVES INSIDE YOUR ADVISOR'S OFFICE

09
CHAPTER

Why Your Advisor Hasn't Told You

We need to address a question that many of our clients ask us in their first conversation: "If this is happening, why hasn't my advisor told me about it?"

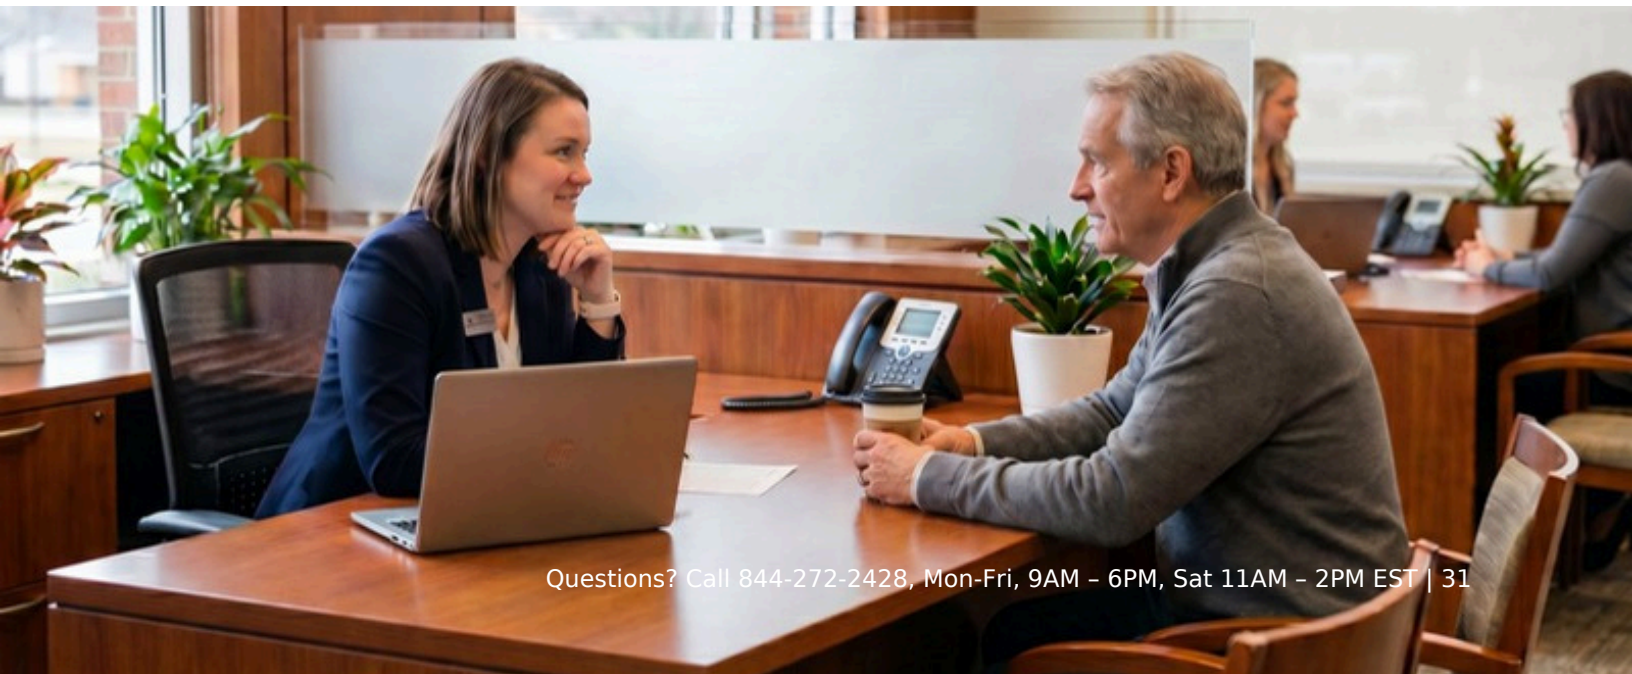

It is a fair question, and it deserves a fair answer. We do not want to denigrate financial advisors as a profession — many of them are good, decent, hardworking people who genuinely care about their clients. The issue is structural, not personal.

There are three reasons your advisor has probably not raised this topic with you.

First: His Compensation Is Tied to Assets Under Management

Most financial advisors are paid based on the size of the portfolio they manage. If you move a portion of your retirement assets into a precious metals IRA at an independent depository, that portion leaves his book. His fee shrinks.

He is not a bad person for noticing this. He may not even consciously think about it. But the incentive shapes which conversations he is comfortable initiating with his clients.

Second: His Firm Probably Forbids the Conversation

Most major brokerage firms have internal compliance policies that restrict what their advisors can say about asset classes the firm does not offer. Schwab, Fidelity, Morgan Stanley, and Merrill do not custody physical gold for retirement accounts in the way an independent depository does. If their advisors began routinely recommending precious metals IRAs to retirees, the firms would lose assets to a competing product they do not own.

The result is a kind of professional silence. The advisor is not technically forbidden from mentioning gold. He is simply not encouraged to, and the path of least resistance is to focus on what the firm sells.

Third: He Does Not Want to Sound Like a Doomsayer

Telling a client that the entire $4.7 quadrillion American capital market is being moved onto blockchain, that the DTCC has disclosed four specific risks, and that the timeline is shorter than most people realize, sounds alarming. Most advisors, by temperament and training, want to be the calm voice in the room. They want to reassure, not alarm.

There is a place for that posture. There is also a place for facts. We are simply telling you the facts.

Your advisor is not a villain. He is doing his job inside a system that does not pay him to raise these particular questions. We will.

Want a second opinion that isn't paid to keep your assets in place? Call now.

BEFORE YOU PICK UP THE PHONE, READ THIS

Chapter 10 — Why You Can Trust This Call

We know this is the part where a lot of marketing reports get manipulative. We are not going to do that.

When you call American Sovereign Bullion, here is what will happen, and what will not happen.

What will happen:

- ✓ You will speak with a senior bullion specialist who has, on average, more than fifteen years of experience in precious metals and retirement accounts.
- ✓ He will listen first. He will ask you about your situation, your timeline, your goals, and your concerns. He will not assume he knows what is right for you.
- ✓ He will answer your questions, including the ones you are nervous about asking. There are no stupid questions in this conversation.
- ✓ If your situation calls for a precious metals IRA, he will walk you through the process step by step — the tax-free rollover, the depository selection, the metals selection, the storage in your name.
- ✓ If your situation does not call for a precious metals IRA, he will say so. We do not take clients for whom this does not make sense. It is not good for them, and it is not good for us.

What will not happen:

- ✗ You will not be pressured. You will not be told there is a deadline that is not real.
- ✗ You will not be sold an exotic, high-commission product. We deal in IRS-approved physical gold and silver, the same metals owned by central banks and serious institutional investors.
- ✗ You will not be asked for your account numbers, Social Security number, or any sensitive information on a first call. That call is for information only.
- ✗ You will not be called repeatedly afterward if you decide this is not the right time. We respect that decision.

That is the call. It usually takes thirty to sixty minutes. It costs you nothing. And it might be the most important conversation you have about your retirement in 2026.

PRACTICAL GUIDANCE

What to Ask For When You Call

Many of our clients have never spoken to a precious metals specialist before. Here are the questions worth asking, in roughly the order they tend to come up.

1. The Tokenization Briefing

Ask for the “Complimentary Tokenization Briefing.” It is a free, no-obligation phone conversation explaining what is happening with the DTCC, how it affects accounts like yours, and what the realistic options are. There is no charge and no commitment.

2. Your Specific Account Type

Tell the specialist what kind of account you have — traditional IRA, Roth IRA, 401(k), TSP, brokerage. The mechanics of what is possible are slightly different for each. Be specific.

3. The Tax-Free Rollover

Ask about the IRS-approved rollover process. Federal tax law (Internal Revenue Code Section 408(m)) allows you to move retirement assets into a precious metals IRA without triggering a taxable event, provided it is done correctly. The specialist will walk you through it.

4. The Depository

Ask which IRS-approved independent depository would hold your metals. Reputable depositories — such as Delaware Depository, Brink’s, and IDS — store metals in your name, segregated from other holdings, fully insured.

5. Which Metals

Ask which metals are appropriate for your situation. Not all gold and silver products are IRS-approved for retirement accounts. The specialist will explain the difference and recommend what fits your goals.

6. Sizing the Allocation

Ask how much of your retirement assets to move. Most clients move between fifteen and twenty-five percent. The right number depends on your age, income needs, and other holdings. Do not let anyone push you above the number that lets you sleep.

THE TWO FUTURES IN FRONT OF YOU

A Year From Now, You Acted

Two scenarios. One year from now. Read them both.

Scenario 1: You did nothing.

It is May 2027. The tokenization service has been live for seven months. The early test transactions are complete. The migration of brokerage accounts is well underway. Your IRA, your 401(k), your brokerage holdings — all of them now exist as tokenized claims rather than the traditional securities they were a year ago.

You received notices. You did not act on them. The window closed quietly.

Your account values may be the same, may be higher, may be lower. The number on the statement is not the issue. The issue is that the legal nature of what you own has shifted in a way you did not authorize, did not benefit from, and cannot reverse.

Your advisor reassures you. Your statements look familiar. Underneath, the system you spent forty years building wealth inside has changed shape.

Scenario 2: You called.

It is May 2027. The tokenization service has been live for seven months. The early test transactions are complete. The migration is well underway.
And a portion of your retirement — perhaps fifteen percent, perhaps twenty, perhaps twenty-five — is not part of any of it. It is physical gold and silver, held at an independent IRS-approved depository in your name, outside the tokenization architecture entirely.
When your grandchildren visit, you can show them a statement from a depository that lists, in your name, ounces of physical metal stored in a vault. Or, if you choose, you can take possession of a portion of those ounces and put a coin in their hand.
Either way, you sleep at night.

These are the two futures. The one you choose is decided not by markets, not by Wall Street, not by the DTCC — but by whether you make the call.

YOUR ROADMAP FROM HERE

Your Six-Step Action Plan

If you have read this far, you already know more about what is happening to American retirement accounts than ninety percent of Americans your age. Here is what to do with that knowledge, in six concrete steps.

STEP 1
CALL

Call American Sovereign Bullion at (844) 272-2428.
Ask for the Complimentary Tokenization Briefing.
Mon-Fri 9am-6pm, Sat 11am-2pm EST.

STEP 2
LISTEN

Spend thirty to sixty minutes on the phone with a senior specialist. Ask your hardest questions. Take notes. Do not commit to anything on the first call.

STEP 3
THINK

Sleep on it. Talk it over with your spouse, your adult children, anyone whose judgment you trust. Take a week if you need a week.

STEP 4
DECIDE

Decide whether a precious metals IRA fits your situation. If it does not, do nothing further. If it does, decide on a percentage that lets you sleep — typically between fifteen and twenty-five.

STEP 5
EXECUTE

If you choose to proceed, the specialist will walk you through the tax-free rollover, the depository selection, and the metals selection. The process typically takes between four and six weeks.

STEP 6
BREATHE

When the rollover is complete, you will receive a statement from your depository showing your metals, in your name, in a vault. File it. Then live the next phase of your life.

Six steps. Roughly six weeks. One phone call to begin.

One phone call to begin.

PLAIN-LANGUAGE DEFINITIONS

Glossary

The terms in this report, defined the way an ordinary person would explain them at a kitchen table.

DTCC
The Depository Trust & Clearing Corporation. The private entity that holds the records on virtually every share of stock, bond, and mutual fund owned by Americans. It is the central nervous system of the American capital market.

Tokenization
The process of converting a traditional security — a share of stock, a bond, a mutual fund unit — into a digital token recorded on a blockchain.

Blockchain
A digital ledger maintained by computers on a network, in which transactions are recorded permanently and (in most implementations) irreversibly.

Smart Contract
A piece of computer code that executes automatically on a blockchain when certain conditions are met. It cannot be easily reversed if it executes in error.

Reversible Claim
The DTCC's own technical term for what your assets become under the new system. It is a digital token representing a legal claim against an intermediary — not direct ownership of the underlying security.

SIPC
The Securities Investor Protection Corporation. A federal corporation that insures up to $500,000 of brokerage holdings against broker failure. Its coverage of tokenized assets has not been formally clarified.

Precious Metals IRA
Also called a self-directed IRA. A retirement account that holds physical gold, silver, platinum, or palladium, in compliance with Internal Revenue Code Section 408(m), stored at an IRS-approved independent depository.

IRS-Approved Depository
An independent vaulting facility approved by the Internal Revenue Service to hold precious metals on behalf of self-directed IRAs. Examples include Delaware Depository, Brink's, and IDS.

Rollover
The movement of retirement assets from one account to another. When done correctly under IRS rules, it does not trigger a taxable event.

CBDC
Central Bank Digital Currency. A digital form of national currency issued and controlled by a country's central bank. Several major jurisdictions are actively researching or piloting one.

IMPORTANT DISCLOSURES

GENERAL

This report is published by American Sovereign Bullion ("ASB") for informational and educational purposes only. It is not investment advice, tax advice, legal advice, or a recommendation to buy or sell any specific security or commodity. Past performance does not guarantee future results. Precious metals can fluctuate in value and may lose value.

TOKENIZATION CLAIMS

References to DTCC announcements, blockchain technology, tokenized securities, smart contracts, SIPC coverage, and related topics are based on publicly available sources as of mid-2026 and reflect the publisher's interpretation of those sources. Readers should verify all factual claims independently and consult qualified legal, tax, and financial professionals before making any investment decision.

CASE STUDIES

The customer stories labeled "Robert" and "Margaret" are illustrative composites. Names, ages, account balances, and specific details are fictional and have been constructed for educational purposes to represent typical retirement-age investor situations. Any resemblance to specific individuals is coincidental.

TAX TREATMENT

Statements regarding the tax treatment of precious metals IRAs are based on current IRS rules and could change. Eligibility for a tax-free rollover depends on the specific facts of the account holder's situation. ASB does not provide tax advice; consult a qualified tax professional regarding your specific situation.

BRIEFING

The "Complimentary Tokenization Briefing" is a free, no-obligation phone consultation offered by American Sovereign Bullion. Availability of the briefing, scheduling, specific topics covered, and duration are subject to specialist availability and may change at any time without notice. The briefing does not constitute investment, legal, or tax advice.

1933 REFERENCE

References to the historical 1933 gold confiscation under Executive Order 6102 are provided for historical and educational context only. They are not a prediction of future government action.

ASB ROLE

ASB is a precious metals dealer. Its specialists are not licensed financial advisors, registered investment advisors, or attorneys, and conversations with ASB specialists do not constitute investment, legal, or tax advice.
