American Sovereign Bullion

FOUR VAULTS. 261.5 MILLION OUNCES. ONE PRICE SET IN 1973.

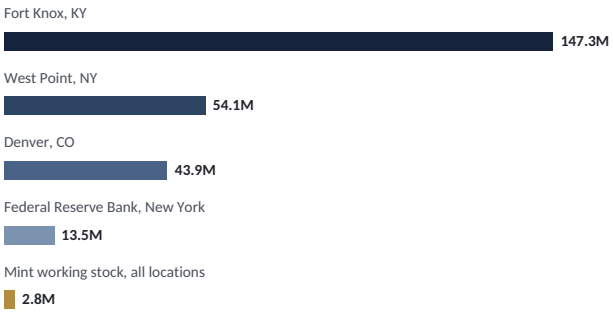

AUGUST 17, 2026

Where the United States Keeps Its Gold

Every ounce of gold the U.S. Treasury owns, by storage location, carried on the government's books at the statutory price and priced at today's market.

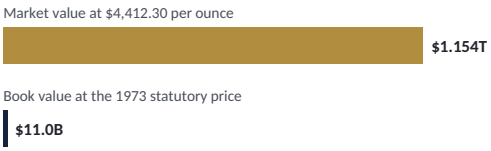

LOCATION	FINE TROY OUNCES	METRIC TONNES	SHARE	BOOK VALUE at $42.2222/oz	MARKET VALUE at $4,412.30/oz
Fort Knox, KY Bullion Depository · deep storage	147,341,858.382	4,582.8	56.3%	$6,221,097,412.78	$650.1B
West Point, NY U.S. Mint · deep storage	54,067,331.379	1,681.7	20.7%	$2,282,841,677.17	$238.6B
Denver, CO U.S. Mint · deep storage	43,853,707.279	1,364.0	16.8%	$1,851,599,995.81	$193.5B
Subtotal — deep storage	*245,262,897.040*	*7,628.5*	*93.8%*	*$10,355,539,085.76*	*$1,082.2B*
Mint working stock All locations · coins, blanks, misc.	2,783,218.656	86.6	1.1%	$117,513,614.74	$12.3B
Federal Reserve Bank–held New York vault · bullion, coin, displays	13,452,810.545	418.4	5.1%	$568,007,257.40	$59.4B
Total U.S. government gold	**261,498,926.241**	**8,133.5**	**100%**	**$11,041,059,957.90**	**$1,153.8B**

Ounces held, by location

Bars are scaled to Fort Knox. Deep storage is bar gold held in vaults. Working stock is the raw material available to the Mint for congressionally authorized coins.

What the books say the same gold is worth

104.5× Market price divided by the statutory price. The gap — about $1.14 trillion — does not appear on the government's balance sheet.

Both bars represent the identical 261,498,926.241 ounces. Only the price applied to them differs.

THE OUNCES ARE A FACT. THE PRICE ON THE BOOKS IS A DECISION.

These ounce counts have not moved in decades. Treasury reports them every month, location by location, and the totals have been effectively unchanged since the early 1970s. What has changed is everything around them. Congress fixed the statutory value of gold at $42 2/9 an ounce in 1973 and has never revisited it, so the entire national gold holding sits on the government's books at about $11 billion — less than one percent of what the same metal would fetch today.

Fort Knox holds a little more than half of it, which is why it gets all the attention, but nearly 44 percent of U.S. gold sits somewhere else. West Point alone holds more than 54 million ounces. Denver holds nearly 44 million. Another 13.5 million ounces of Treasury-owned gold is stored at the Federal Reserve Bank of New York. The shorthand that "America's gold is in Fort Knox" has been wrong for as long as the current tables have existed.

Read this page narrowly. It shows what the Treasury reports it owns and where it reports the metal sits. It does not include the foreign central bank gold stored in the same New York vault, which is not U.S. property. These are Treasury's own reconciliations, verified on a rolling compartment-seal basis rather than by an independent bar-by-bar assay. And nothing here says whether gold is cheap or expensive today. It says only that the number on the government's ledger and the number in the market are two very different numbers for the same bars.

Notes. Ounces are fine troy ounces as reported in the Status Report of U.S. Government Gold Reserve, U.S. Department of the Treasury, Bureau of the Fiscal Service. Book value is total ounces multiplied by the statutory price of $42.2222 per fine troy ounce, set by law in 1973 and unchanged since. Market value is the same ounces priced at a spot quote of $4,412.30 per ounce on August 17, 2026, and moves with the market; figures are rounded. Tonnes converted at 32,150.7466 fine troy ounces per metric tonne. Federal Reserve Bank–held gold is Treasury-owned gold stored at the Federal Reserve Bank of New York, including bullion, coin, and display items; it does not include gold held there in custody for foreign central banks and international organizations. Deep storage is bar gold held in vaults. Working stock is coin, blanks, and miscellaneous gold available to the Mint as raw material. Shares and rounded market values may not sum exactly to the totals shown.
